ISSUE:

A resolution authorizing an agreement to purchase digital orthorectified aerial photography from Salt Lake County Surveyor's Office, flown in Spring 2009.

SYNOPSIS:

This resolution authorized the City to enter in an agreement for the purchase and use of digital orthorectified aerial photography of West Valley City at a discounted rate from Salt Lake County.

BACKGROUND:

Current, accurate digital orthorectified photography has many uses within the City. The photos are used by the majority of the City Departments to visualize and identify growth; compare urban changes with aerial photography from previous years; as a reference for new spatial information; as a background for online map viewers and printed maps, etc.. Additionally the format is compatible with many of the existing GIS applications that are used and developed by City GIS staff. The aerials photography is more accurate, both horizontally and vertically than the previously acquired aerial photography, is natural color (versus black and white), and will save the City approximately \$324 per square mile by participating in this agreement with Salt Lake County, if purchased by December 31, 2009. The City will purchase the aerial photography at a reduced cost of \$126.00 per square mile, for 35.827 miles for a total cost of \$4,514.20.

RECOMMENDATION:

City Staff Recommends approval of this resolution.
